F Subject Activity Report Week Ending 8/2/87

- 7/67 ① Port of Seattle accepted our demand of \$22K for the property swap providing we "handle" the transaction. Awaiting written confirmation.
2. Met with Lone Star Industries. Indicated that last forecast submitted to them is still valid. Advised them ship scheduled for 8/28 can be received only if silo of contaminated cement, unloaded on 5/10/87 is removed.
- 7/67 3. Electrical and rail contractors beginning work on rail unloading pit. Excavation to begin next week.
- ④ 4. Decision required: What is monthly sales forecast from West Terminal for balance of the year; what type of cement will be pumped to Stoneways new plant.
- 7/67 5. Met with subcontractor for EPA to discuss concerns about potential Superfund status of the plantsite. Their concern over Cr in our pond is at odds with years of analysis, ^{which} showed Cu to be a problem but not Cr. Likely a typographical error was made along the line. Much time spent discussing kiln brick disposal practices.
6. Initial planning in process for logging of Superior Quarry site. Logging permit has been approved.
- 7/67 7. Held two safety committee meetings. No Accidents.
- 7/67 8. Truck went to West Terminal for load which should have been picked up at Plant. Loader failed to check and wrong cement was delivered. Two loads had to be hauled back.
- 8/67 9. ~~More~~ complaints over Stoneways slow response to truck wash relocation.
10. More cement transferred from West Terminal to Plant so bulk bag order can be made up for 32 tons customer.
11. No visitors.
